## Cataract Surgery Options

Your surgeon will discuss your decision with you to determine which option best suits your individual needs.

### Conventional Package

- **Standard cataract surgery with a traditional intraocular lens**

  **What to expect:**
  You may need glasses 100% of the time for astigmatism, distance, intermediate, and near vision activities.

  **What is included:**
  This package includes basic cataract surgery with a monofocal lens and no additional fees.

- **Basic cataract surgery:**
  Monofocal means that it has one focusing point and will correct your vision at that point once the cataract is removed. With this lens option, it is common to need glasses for distance, intermediate, near and to correct astigmatism. You may need either a bifocal, trifocal or reading glasses.

### Astigmatism Packages

- **Custom laser cataract surgery with astigmatism correction to decrease dependency on glasses**

  **What to expect:**
  The goal is to achieve one of:
  - Better distance vision and wear reading glasses
  - Better reading vision without glasses but wear distance glasses
  - Blended vision, also known as “mild monovision” is used to achieve better distance vision and less dependency on reading glasses.

  **What is included:**
  - Precision Laser Assisted Cataract Surgery
  - Specialized measurements
  - Astigmatism treatment:
    - Moderate to Severe Astigmatism: Laser astigmatism treatment and/or Toric (astigmatic) lens implant.

### Multi-Focal Package

- **Custom laser cataract surgery with presbyopia correction lenses, and astigmatism correction to decrease dependency on glasses**

  **What to expect:**
  The goal is not to wear glasses the majority of the time for distance and near vision. It may still be necessary to use glasses for fine print at near or intermediate distance and may require appropriate lighting.

  **What is included:**
  - Precision Laser Assisted Cataract Surgery
  - Advanced testing and measurements
  - Custom lens technology
  - Astigmatism treatment
  - Laser Vision Correction (if needed)

- **Presbyopia correcting lenses:**
  These lenses offer most patients functional near and distance vision with less dependency on glasses. These lenses have helped numerous people gain independence from glasses.
